1. Reference is made to basic communication.
2. There is no indication that any attempt was made to consolidate Unknown X-6179 (St.Avoid) with related cases.
3. The teeth of Unknown X-6179 compare with the OQMG Form 371 dental chart of S/Sgt. Earl L.PRAUMAN, 20139892. It is requested that the inclosed tooth chart be compared with the dental records of all five casualties concerned to determine whether Unknown X-6179 should be consolidated with T/4 Joseph THOMAS, 35394300, whose dental characteristics are not on file at this Headquarters. It will be noted that the skeletal systems of Unknown X-6179 and T/4 THOMAS may consolidate. No action will be taken until your office advises proper disposition.

This dental chart is very important and should be filled in with great care. There are 32 teeth to be accounted for, as shown by the numbers on the chart. Beginning at the middle line in both upper and lower jaws, the teeth are arranged symmetrically on either side and classed as incisors (cutting teeth), cuspids or canines (tearing teeth), bicuspid (chewing teeth), and molars (principal chewing teeth). An examination should be made and findings charted to cover the following basic conditions: Lost teeth, crowned teeth, bridge work, fillings, caries (cavities of decay), dentures (plates), and any deformity of jaws found. See reverse side for illustrations.

This dental chart is very important and should be filled in with great care. There are 32 teeth to be accounted for, as shown by the numbers on the chart. Beginning at the middle line in both upper and lower jaws, the teeth are arranged symmetrically on either side and classed as incisors (cutting teeth), cuspids or canines (tearing teeth), bicuspid (chewing teeth), and molars (principal chewing teeth). An examination should be made and findings charted to cover the following basic conditions: Lost teeth, crowned teeth, bridge work, fillings, caries (cavities of decay), dentures (plates), and any deformity of jaws found. See reverse side for illustrations.

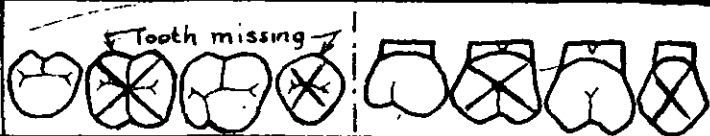

*The mandible R10 to L16, and the maxilla were not found.
R16 is granulated in.
R15 has an amalgam filling on its mesial surface.*
