Case Mistery

Unknown I-8136

Plot FF, Row 3, Grave 36

The remains of Unknown X-8136, USMS St.Aveld, France, were recovered from an isolated grave at BARANTHAL, Moselle, France.

These remains were fermerly identified as those of Gpl. Thomas J. Morlook, 32580211, by an identification tag bearing his name, but upon reprocessing, Unknown I-534 USEC St. Avaid was definitely identified as the remains of Gpl. MORLOGK.

The tooth chart for Unknown X-6136 has been checked against all available dental records of unresolved casualties on Moselle Map Sheet with negative results; particular attention was given to the vicinity of Marenthal.

A thorough investigation has been conducted in an effort to associate these remains by other means with all available information in this headquarters but no association could be made.

In view of the negative results of the investigation, it is recommended that this case be declared UNIDENTIFIABLE.

Jack Beeff Investigator

This dental chart is very important and should be filled in with great care. There are 32 teeth to be accounted for, as shown by the numbers on the chart. Beginning at the middle line in both upper and lower jaws, the teeth are arranged symmetrically on either side and classed as incisors (cutting teeth), cuspids or canines (tearing teeth), bicuspids (chewing teeth), and molars (principal chewing teeth). An examination should be made and findings charted to cover the following basic conditions: Lost teeth, crowned teeth, bridge work, fillings, caries (cavities of decay), dentures (plates), and any deformity of jaws found. See reverse side for illustrations.
