This dental chart is very important and should be filled in with great care. There are 32 teeth to be accounted for, as shown by the numbers on the chart. Beginning at the middle line in both upper and lower jaws, the teeth are arranged symmetrically on either side and classed as incisors (cutting teeth), cuspids or canines (tearing teeth), bicuspid (chewing teeth), and molars (principal chewing teeth). An examination should be made and findings charted to cover the following basic conditions: Lost teeth, crowned teeth, bridge work, fillings, caries (cavities of decay), dentures (plates), and any deformity of jaws found. See reverse side for illustrations.

Verified by G. R.C. Officer

<p>MISSING TEETH... All teeth missing through previous extraction (not those fractured or displaced by recent wounds) should be "X" 'd out and labeled, thus :</p>	
<p>CROWNED TEETH... Block in solid the crown of tooth (label gold, porcelain, Silver or gold and porcelain), thus :</p>	
<p>BRIDGE WORK... Block in solid the crown of tooth (label gold bridge, gold and porcelain bridge), thus :</p>	
<p>FILLINGS... Draw filling on tooth as accurately as possible (block in and label gold, silver, cement), thus :</p>	
<p>CARIES (CAVITIES). Outline location and size of cavity, shade in thus :</p>	

DENTURES (PLATES)... Draw diagram of relative size and shape of plate, block in teeth attached and indicate retaining clasps on natural teeth with the word "clasp"

CASE HISTORY

UNKNOWN NO. X-416

U.S. MILITARY CEMETERY

St. Avold

(Location)

Tooth chart obtained for the remains of X-416 has been compared with available dental records for all unresolved casualties in Map Sheet Ger N-52 with negative results.

Efforts to associate subject remains with an unresolved casualty or casualties by all other means have proven negative.

In view of the negative results of the investigation mentioned above, it is recommended that this case be declared Unidentifiable.

SUBJECT: Identification of World War II Deceased

TO: Commanding Officer
7887 Graves Registration Detachment
APO 757, c/o Postmaster
New York, New York

1. Reference is made to Unknowns X-6495 and X-6730A and B, St. Avold, reprocessed 8 December 1949 under Exhumation Order #2848.

2. Report of anthropologist and narrative of technician indicate identification of X-6495 and X-6730 A as Sgts. Joseph Dravecky 13003267 and Harold J. Watts 16038750, respectively, the two unresolved casualties of A/C 42-97526.

3. A review of data for X-6495 appears to confirm identification as Sgt. Dravecky, although articulation between the skull and vertebral column is impossible because of missing vertebrae. In the case of X-6730 A, however, the fragmentary nature of the remains, the lack of articulating points and dental features seem to preclude individual identification as Sgt. Watts.

4. Enemy records disclose the interment of the casualties of A/C 42-97526 in Furth Cemetery. In view of the fact that Unknowns X-6730 A and B, X-6495 and two identified crew members of this craft were recovered from a common grave in Furth Cemetery, which was marked with the names of the casualties of this plane, it is requested that these cases be reinvestigated and, if warranted, that Field Board Findings be submitted to this Office at the earliest practicable date.

This dental chart is very important and should be filled in with great care. There are 32 teeth to be accounted for, as shown by the numbers on the chart. Beginning at the middle line in both upper and lower jaws, the teeth are arranged symmetrically on either side and classed as incisors (cutting teeth), cuspids or canines (tearing teeth), bicuspids (chewing teeth), and molars (principal chewing teeth). An examination should be made and findings charted to cover the following basic conditions: Lost teeth, crowned teeth, bridge work, fillings, caries (cavities of decay), dentures (plates), and any deformity of jaws found. See reverse side for illustrations.
