This dental chart is very important and should be filled in with great care. There are 32 teeth to be accounted for, as shown by the numbers on the chart. Beginning at the middle line in both upper and lower jaws, the teeth are arranged symmetrically on either side and classed as incisors (cutting teeth), cuspids or canines (tearing teeth), bicuspids (chewing teeth), and molars (principal chewing teeth). An examination should be made and properly charted to cover the following basic conditions: Lost teeth, crowded teeth, bridge work, denture bases (cavities of decay), dentures (plates), and any deformity of jaws found. See reverse side for illustration.
