9 April 1947

NARRANTIVE

On 8 April 1947, I was sent to BERGZABERN, Germany, to exhume four (4) American deceased. Upon arrival at this area, the deceased were already put in coffins by French authorities after having been found in a mined area near BOLLENBORN, Germany. However, upon removal of the deceased from the French coffins to our coffins, the remains were found in the following state:

DANIEL WILBORN: ASN - 38687664, decomposed, with most of the body bones, including head, back, arm, and leg bones. Also ID tags, helmet with liner, rifle M1, Cal. 30, serial number 1883594, and a bayonet was found.

bones, including head, arm, and leg bones. Also ID tags, helmet with liner, billfold, and some clothes were found. VV-/2-299

few leg bones. Also TD tags, helmet with liner was found. U - 12 - 283

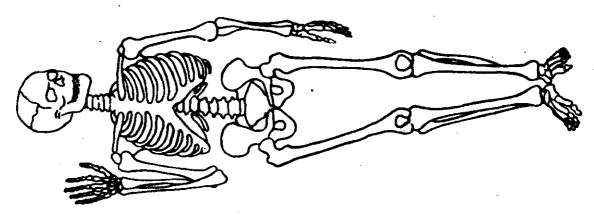

UNKNOWN - Decomposed, with a few body bones, including head, arm, and leg bones. Also helmet with liner was found.

Christopher O. Lira CHRISTOPHER O. LIPA RA - 39591706

CHART " A-1 "

E.O. # 2034 2304 X-5447 Neuville en Condroz 11 July 1949 The teeth charted for Care X-5447 are similar to form 37% for Ericksen, Christian V. 1909 5617 excepting the L7 and L8. This section has been fractured - and part of the alveolar process is -missing, it is not braken so deep though but that the road sockets should appear, but no evidence of the root sockets for L7 and L8 are greent. Iwo and one-half years of service would be ample time for extraction of these teeth and granulation. Form 371 states that two shotostat capies of form 79 are inclosed but they have Inot been received at This station, so it cannot be determined at the present time whether 17 and 18 have been extracted since the form 371 was made, or not. I It is sassible that in his two and one half years service that there teeth Could have been extracted, then Comparison would be accurate. It is accurate according to form 37/ up to 17 from PS Saral S. Sheeler

N- 5-447 Neuville U-12-282

This dental chart is very important and should be filled in with great care. There are 32 teeth to be accounted for, as shown by the numbers on the chart. Beginning at the middle line in both upper and lower jaws, the teeth are arranged symmetrically on either side and classed as incisors (cutting teeth), cuspids or canines (tearing teeth), bicuspids (chewing teeth), and molars (principal chewing teeth). An examination should be made and findings charted to cover the following basic conditions: Lost teeth, crowned teeth, bridge work, fillings, caries (cavities of decay), dentures (plates), and any deformity of jaws found. See reverse side for illustrations.

X-5447 hewill

UNIVERSITÉ DE LIÉGE

Laboratoire d'Anthropologie

Institut d'Anatomie

20, rue de Pitteurs

11 July 1949.

Anthropological Report.

The problem whether the remains of Unknown X-5447 are to be consolidated with those of ERICKSEN Christian V. cannot be solved on the basis of anthropological investigation.

X - 5447.

The fragments consist only of a skull, including teeth, and a frahment of a left tibia.

The skull has belonged to a man aged about 55 years; that comclusion is grounded on the state of the sutures closure. As we do not know the date of ERICKSEN birth, we cannot infer enything from that.

The set of teeeth now with X-5447 is very similar to the dental chert of ERICKSEN Christian (teeth 4 and 8 extracted). However, there are some differences: i) the tooth nº 7 (second molar) shows an attended decay, while, on the dental chart of ERICKSEN, that tooth is intect. ii) though the posterior part of the upper left slweolar margin is broken, it is visible that the second molar was missing while that tooth is showed present on the dental chart of ERICKSEN.

As the dental chart is dated 28 July 1942 and ERICKSEN death took place on 19 Dec. 1944, it is possible that these changes occured in the interval.

So, I am inclined to think that the teeth in skull X-5447 are those of ERICKSEN Christian V., but I cannot settle the matter.

The fragment of left tibia, now with the remains X-5447, does not likely belong to ERICKSEN. Indeed, that tibis (though unmeasurable) seems to be too short in regard to the height of ERICESEN (6'1") and, on the other head, there is still a left tibia with the remains of ERICKSEN.

It is impossible to settle whether that fragmentary tibia goes with the skull or not.

2) Remains of ERICKSEN Christian ▼;

They consist only of three bones: right iliac bone, Fight femir and Tightathin left tibia. These bones metch together and the length of the femur (49,5 cm.) and of the tibis (41 cm.) is in accord with the height of ERIEKSIN.

We have no means to settle whether these boxes are to be consolidated with the skull X-5447 or mot. F. VANDERVAEL, M.D.

HARRATIVE

On 8 April 1947, I was sent to BENEARTH, Germany, to exhuse four (h) American deceased. Upon arrival at this area, the deceased were already put in coffins by French authorities after having been found in a mined area near BOLLEMBORN, Germany. However, upon removal of the deceased from the French coffins to our coffins, the remains were found in the following state:

DANIEL WILECH: ASN - 38687661, decomposed, with most of the body bones, including head, back, arm, and leg bones. Also ID tage, helmet with liner, rifle M1, Cal. 30, serial number 1883591, and a bayonet was found.

WANKE, EARL H.: ASH - 39199h90, decomposed with few body bones, including head, arm, and leg bones. Also ID tags, helmet with liner, billfold, and some clothes were found.

ENICKSEM, CHRISTIAN: ASK - 19095617, decomposed - only a few leg bones. Also ID tags, helmet with liner was found.

arm, and leg bones. Also helmet with liner was found.

GURISTOPHER O. LIBA
