## ATTACHED SHEET TO FORK #1042

# REMARKS: (Cont'd)

This is a reburial box containing the remains of an Unknown which were transferred by 3rd Field Command to the Central Identification point on the latter's activation, in August 1946.

An intensive search was conducted for any case records on this particular case but to no avail. This search included checking the records of the former 3rd Field Command which were later transferred to 1st Field Command.

The only papers available to form a case record for Evacuation Number 9152 are those originating at the C.I.F.: i.e., Form #11, Check List, Form 1A, Tooth Chart, and Fluoroscopic Report.

processing at Central Identification Point revealed no positive identifying clues, therefore, this case is classified

#### "UNKINOTAN".

It is very possible that these remains are not of an American because of the teeth. (See Tooth Chart).

#### IDENTIFICATION CHECK LIST

(To be completely filled out and attached to each copy of Report of Interment WD QMC Form 1042)

16 This d	15 14 ental chart is ve	rv importan	11 10	9 9 sould be	filled in	11 n with	great c	are. Th	emarks here are	32 teeth	

This dental chart is very important and should be filled in with great care. There are 32 teeth to be accounted for, as shown by the numbers on the chart. Beginning at the middle line in both upper and lower jaws, the teeth are arranged symmetrically on either side and classed as incisors (cutting teeth), cuspids or canines (tearing teeth), bicuspids (chewing teeth), and molars (principal chewing teeth). An examination should be made and findings charted to cover the following basic conditions: Lost teeth, crowned teeth, bridge work, fillings, caries (cavities of decay), dentures (plates), and any deformity of jaws found. See reverse side for illustrations.

GRAVES REGISTRATION FORM NR. 1-A

DENTURES (PLATES)... Draw diagram of relative size and shape of plate, block in teeth attached and indicate retaining clasps on natural teeth with the word "clasp".

#### ADDITIONAL SPACE FOR FURTHER REMARKS

Posthumously missing, I 1.

Spaces: R 5-7, NONE; R 13-15, NONE; L 5-7, NONE, I,13-15, NONE.

Rotated mesially 1/8 turn, R 7 and L 7, 13.

Rotated distally 1/8 turn, R 4 and L 12.

Medium sized ivory colored teeth in fair alignment.

I 2 broken off as indicated by shading, impossible to determine whether before or after death.

It is possible that this man is not an American, as it is unusual to have silicate fillings in posterior teeth; also L 2 and L 4 would, ordinarily have been extracted in America, (the restorations are very large).

Several small caries present, also indicate that this man was not in the American Army.
