21. REMARKS AND ADDITIONAL INFORMATION

Picture a tall man in his early thirties, of more than average muscularity. The skull is small in size, oval in shape, and has a low vault. The backhead is prominent and there is a slight depression above lambda. The face is quite flat. The nasal roof is very broad, with a large nasal opening.

The mouth parts show more than average alveolar prognathism. The palate is very broad and relatively high. The lower jaw is broad and heavy, and shows gonial eversion, which is more pronounced on the right than on the left. The chin is deep and presents a bilateral eminence. The length and breadth of the skull, the shape of the orbital and nasal openings and the shape of the palate indicate that the remains may be of Negroid extraction.

Fluoroscopic examination not necessary. Teeth charted.

I CERTIFY THAT I HAVE PERSONALLY VIEWED THE REMAINS OF DECEASED AND THAT ALL RESULTING INFORMATION HAS BEEN RECORDED TO THE BEST OF MY KNOWLEDGE
