- 1. General condition: Mixed lot of long bones, complete and partial, ribs, innominates, scapulae, clavicles, mandibles and cranial fragments.
  - 2. Co-mingling: Yes.
  - 3. Age: All appear to be adult.
  - 4. Stature: Not determined.
  - 5. Dentition: Forms 1044a(A) and (B) are correct.
  - 6. Hair: UTD
  - 7. Race: -
- 8. Conclusions: Available data associate these remains with group burial of 10 individuals now at <sup>J</sup>efferson Barracks National Cemetery. Not less than four (4) individuals are represented in X-5306 and I am in general agreement that 6-7 individuals may be present. It is improbable that more than 10 are represented since there is association with a B-24 crew of 10, although without this association, the possible number of individuals is equal to the number of separate bones recovered.

With the exception of the complete and the partial mandible, it appears to me unlikely that a satisfactory segregation and identification of these co-mingled remains could be made, even with the Form 371 data for each crew member. The chances of a better segregation and identification would be increased if the present X-5306 remains were combined for sorting and identification with the remains now forming the group burial at Jefferson Barracks National Cemetery. It should be pointed out that X-5306 is the second lot of remains to be recovered from the same locality and the report of the AGRS field investigator does not actually exclude the possibility that erosion and changes in the jungle vegetation may uncover or reveal further remains.

Experience with similar cases in the past leads me to the opinion that the combining of X-5306 with the Jefferson Barracks National Cemetery group burial would lead to (1) identification of perhaps half the individuals; (2) uncertainty as to the remaining individuals; (3) uncertainty as to a considerable number of fragments; (4) final disposition not possible until recovery of additional fragments or parts in the Philippines is clearly impossible.

Recommendation: That additional efforts at segregation and identification not be undertaken.

Theodore D. McCown

Professor of Anthropology

SUBJECT: Transmittal of QMC Forms 1044 and Statement of the Anthropologist

TO: Commanding Officer
American Graves Registration Service
Pacific Zone
APO 958, c/o Postmaster
San Francisco, California

#### 1. Reference:

Radio MP 24015, USARPAC, dated 21 September 1951

- 2. In compliance with above reference, transmitted herewith are new QMC Forms 1044 and statement of the anthropologist relative to the reprocessing of UNKNOWN X-5305 Manila Mausoleum.
- 3. It will be noted that six (6) sets of QMC Forms 1044 were accomplished for subject Unknown. This action was found necessary in an effort to give a detailed description of the skeletal materials which comprise the remains. It should not, therefore, be construed to mean that UNKNOWN X-5305 has been definitely segregated into six (6) individual remains.

FOR THE COMMANDING OFFICER:

 $T_{i_{M}}$ 

12 October 1951

#### STATEMENT

Reference: UNKNOWN X-5305 Manila Mausoleum

The above remains were examined and reprocessed by me, this date, to accomplish tentative skeletal charts and to give a detailed description of subject remains.

In a statement of findings dated 15 June 1951, it is stated that, "Since the crania and many of the long bones are mangled, and since many of the long bones are missing, the present condition of the above remains precludes the segregation of the skeletal material into individual remains."

However, to comply with the radio message MP 24015, this Laboratory has attempted to segregate the skeletal material, mainly for the purpose of indicating the quantity and contents of subject remains. It must be noted that each of the QMC Forms 1044 ("A" thru "F") does not represent a single individual because in many cases, the condition of the remains prevents substantiating proof of articulation. Thus, the associations made by this Laboratory are arbitrary, and complete QMC Forms 1044 have been accomplished only to give a clear picture of the remains present.

In addition, the following list of measureable long bones was compiled:

```
Femur, right,
                 44.3 cms.
                 48.5 "
                 51.0 "
                 40.3 "
Tibia, right,
                 39.0 "
Fibula, right,
                 39.5 "
        left,
                 35.5 ."
Humerus, right,
                             Paired.

#### STATEMENT

Reference: UNKNOWN X-5305 Manila Mausoleum

The above remains were examined and reprocessed by me, this date, to accomplish tentative skeletal charts and to give a detailed description of subject remains.

In a statement of findings dated 15 June 1951, it is stated that, "Since the crania and many of the long bones are mangled, and since many of the long bones are missing, the present condition of the above remains precludes the segregation of the skeletal material into individual remains."

However, to comply with the radio message MP 24015, this Laboratory has attempted to segregate the skeletal material, mainly for the purpose of indicating the quantity and contents of subject remains. It must be noted that each of the QWC Forms 1044 ("A" thru "F") does not represent a single individual because in many cases, the condition of the remains prevents substantiating proof of articulation. Thus, the associations made by this Laboratory are arbitrary, and complete QMC Forms 1044 have been accomplished only to give a clear picture of the remains present.

In addition, the following list of measureable long bones was compiled:

```
44.3 cms.
Femur, right,
                 48.5 11
                 51.0 "

#### STATEMENT

Reference: UNKNOWN X-5305 Manila Mausoleum

The above remains were examined and reprocessed by me, this date, to accomplish tentative skeletal charts and to give a detailed description of subject remains.

In a statement of findings dated 15 June 1951, it is stated that, "Since the crania and many of the long bones are mangled, and since many of the long bones are missing, the present condition of the above remains precludes the segregation of the skeletal material into individual remains."

However, to comply with the radio message MP 24015, this Laboratory has attempted to segregate the skeletal material, mainly for the purpose of indicating the quantity and contents of subject remains. It must be noted that each of the QMC Forms 1044 ("A" thru "F") does not represent a single individual because in many cases, the condition of the remains prevents substantiating proof of articulation. Thus, the associations made by this Laboratory are arbitrary, and complete QMC Forms 1044 have been accomplished only to give a clear picture of the remains present.

In addition, the following list of measureable long bones was compiled:

```
Femur, right,
                 44.3 cms.
         11
                 48.5 "
                 51.0
Tibia, right,
                 40.3
                 39.0 "
Fibula, right,
        left,
                 39.5
Humerus, right,
                 35.5
                              Paired.
                 35.5 "
         left,
 Ħ
                 36.0 "
         right.
 11
         left,
                 35.2
                 27.0
Radius, right,
        left,
                 26.4
 11
                 26.3
        right,
                 28.0 "
Ulna, right,
                             Paired.
                 27.9
      left,
      right,
                 27.5
```

Bi-iliac Measurements 26.2 cms. 26.6 "

All of the other identifying criteria available from subject remains has been placed on the QMC Forms 1044.
