This dental chart is very important and should be filled in with great care. There are 32 teeth to be accounted for, as shown by the numbers on the chart. Beginning at the middle line in both upper and lower jaws, the teeth are arranged symmetrically on either side and classed as incisors (cutting teeth), cuspids or canines (tearing teeth), bicuspids (chewing teeth), and molars (principal chewing teeth). An examination should be made and findings charted to cover the following basic conditions: Lost teeth, crowned teeth, bridge work, fillings, caries (cavities of decay), dentures (plates), and any deformity of jaws found. See reverse side for illustrations.

CASE HISTORY

Unknown X-6564-A

United States Military Cemetery St Avold(France)

1. The remains of Unknown X-6564-A, USMC St. Avold, were recovered from the civilian cemetery at HOCHMUTTING, Germany, along with numerous other unknown deceased.

2. After comparing the tooth chart contained in the case of Unknown X-6564-A with all available dental data on unresolved casualties, within the Germany M-49 area, no reliable comparison could be made that would permit the identification of the deceased. The Laundry marking "G-9538" does not appear in AG casualty listings; however, "G-9538" is shown as belonging to an unresolved casualty, T/Sgt Orna E. Cottingham, 20649538, whose remains have been declared non-recoverable. The dental records of T/Sgt Cottingham were compared with the tooth chart of Unknown X-6564-A with negative results. T/Sgt Cottingham is further disassociated by the fact that he was reported lost in the English Channel. Since the Skeletal chart of Unknown X-6564-A reveals a smooth fracture at the proximal end of the left humerus, OCMG Forms 371 on unresolved casualties within the Germany M-49 area were checked in an effort to establish an association through this means; however, this also proved negative.

3. In view of the foregoing it is recommended that this case be declared UNIDENTIFIABLE.

This dental chart is very important and should be filled in with great care. There are 32 teeth to be accounted for, as shown by the numbers on the chart. Beginning at the middle line in both upper and lower jaws, the teeth are arranged symmetrically on either side and classed as incisors (cutting teeth), cuspids or canines (tearing teeth), bicuspids (chewing teeth), and molars (principal chewing teeth). An examination should be made and findings charted to cover the following basic conditions : Lost teeth, crowned teeth, bridge work, fillings, caries (cavities of decay), dentures (plates), and any deformity of jaws found. See reverse side for illustrations.

INSTRUCTIONS:

(a) Great care will be taken to record the most minute clues for the future identity of unidentified remains. Fill in anatomical characteristics below, and any other clues under "Other," such as shoe size, social security number; position of body found in airplanes, vehicles, and tanks; and serial numbers of airplanes, vehicles, and tanks.

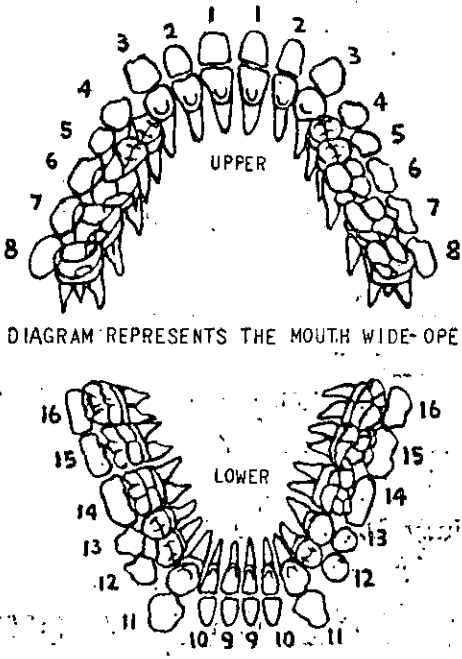

(b) A fingerprint, or prints, are the most valuable of all clues. Imprint all fingers and thumbs in the chart at left, or as many as possible. If no fingerprint or prints can be secured, the condition of each and every tooth will be indicated on the tooth chart in accordance with diagram below. Tooth chart will not be accomplished if one or more fingerprints are secured.
