SUMMARY OF INVESTIGATION

XJ-1275

UNKNOWN MONGOLOID

XJ-1275 hereby determined to be those of an unknown Mongoloid, was recovered from ISHIMINE, GIBO, OKINAWA (Map Sheet #133 Grid Coord:066-733) and forwarded to the United States Army Mortuary, Far East for laboratory processing.

Laboratory processing of subject remains reveals the following:

Race - Mongoloid

Age - 18 - 20

Height - T 5'2½"

Based on the factors set forth above, the remains designated XJ-1275 are determined to be those of an unknown Mongoloid.

MORTUARY
RYCOM QUARTERMASTER DEPOT
FORT BUCKNER, APO 331

Recovery #1

Identification tags recovered by Okinawan in September while digging for scrap metal. This Okinawan retained these tags at his home until 11 December at which time he turned them over to the Shuri Civilian Police. Although the general area of the recovery of these tags was known by the Shuri CP, apparently no attempt had been made to establish identity of the finder. This writer, the CI, and the Shuri CP, went to this area and found it to be completely dug over by additional Okinawans while seeking scrap metal. This turned-over area covered the entire side of a hill and a thorough search was conducted with the recovery of the enclosed mandible, femur, and calcaneus, which are not to be construed as bearing relation to recovery of ID Tags.

Recovery #2

This recovery was made on the side of a hill overlooking Yonabaru Air Strip which saw considerable action during World War II. Additional information is contained in attached DD Form 581 which was completed by Agent Beattie of Rycom CI.

Recovery #3

These eight remains were discovered by an Okinawan while searching for scrap metal. His statement reveals that these eight remains (each with individual tags), were in separate graves in a line running north and south on the west side of a hill as indicated on attached map. He further states that he removed all tags from remains along with Personal Effects and turned them over to USCAR authorities who in turn brought them to the mortuary. These ID tags and Personal Effects were consolidated in one container. This Okinawan further stated that he had removed the tags in such a manner that he was capable of returning each of them to the original grave. Although no enthusiasm was voiced by this writer, this method was adopted and tags returned as indicated. Personal Effects are forwarded as received.

UNKNOWN XJ-1275, Recovery # 1, SHURI, OKINAWA

Subject remains were processed for anthropological examination.

Upon examination it determined that these remains, consisted of the mandible and left femur and right calcaneus, were from one and the same individual based on race, age, relative size, bone texture and general bone-morphology.

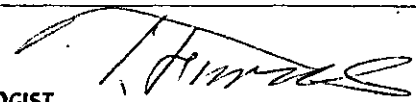

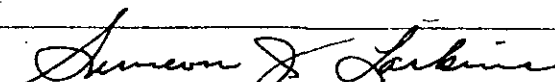

These remains were determined to be Asiatic Mongoloid.

Necessary case papers have been prepared.

TADAO FURUE
Anthropologist

The following Mongoloid skeletal characteristics were found to be present in these remains:

Brachycephaly	Dull lower nasal borders
Simplified sutures	Mid-facial prognathism
Cranial asymmetry	Shallow, rounded palate
Narrow nasal bones	<u>Rounded, straight chin</u>
Wide interorbital space	<u>Mandibular thickening</u>
Flat, circular nasal aperture	High, rounded talus
Wide, heavy malars	Shovel-shaped teeth

The following culturally acquired characteristics were found:

Abnormal tooth wear

Asiatic dental restorations

Squatting facets

Note: The characteristics not circled are absent due to missing skeletal portions and/or are non-diagnostic.
